Subject: Recommendation Letter for Mohammed Faiz

To Whom It May Concern

I am pleased to write this letter of recommendation for Mohammed Faiz, who has worked as a Software Engineer Intern. Faiz has made substantial contributions to our Smart Cities products, while demonstrating a strong proficiency in frontend technologies, effectively utilising frameworks like React.js to develop intuitive user interfaces, and enhancing visual experiences with Three.js. His ability to seamlessly integrate these with backend technologies, primarily through Node.js, has significantly improved the functionality and efficiency of our solutions.

Faiz is always eager to expand his skill set beyond the initial scope of his role. He independently took the initiative to learn relevant technologies such as ROS (Robot Operating System), MQTT for messaging, and Docker for containerization. He leverages his technical knowledge to adhere to best practices and efficiency where possible.

He is an independent learner who attempts to solve problems by himself - but is not shy to ask for help when needed. He is also a good team player and has demonstrated good interpersonal and communication skills in a highly diverse team.

Furthermore, Faiz has shown great adaptability and commitment to his professional development, qualities that are immensely beneficial to any technology-driven company. His dedication to our projects and his rapid acquisition of new technological skills have greatly benefited our company, and I am confident that these qualities will make him an asset to any future team.

Yours faithfully,

Dr Ali Hasnain
Founder & CEO, Curium Pte. Ltd
